AERIAL LIFT TRAINING

Hanford work involves serious hazards, making aerial lift projects even more complex. An average of 26 deaths occur each year in the United States due to aerial lift accidents, making it critical for operators to be proficiently trained.

- Delivers hands-on training in inspection methods, operations, and fall protection measures
- Provides on-the-job training and evaluations in the field
- Ensures workers meet and exceed the training and qualification requirements and standards (OSHA, ANSI)

Through student-centered training, HAMMER's Aerial Lift Training Program produces competent, knowledgeable lift operators.

Realistic scenarios, props, and instruction delivered by subject matter experts and worker trainers engage students, leading to increased learning retention. Training equips workers with the essential knowledge and skills to work safely.

HAMMER brings training to the field offering on-the-job training and evaluations to ensure workers are confident and safely complete aerial lift work.
