

## Fall Protection Training

Falls are the **number one** cause of **deaths** in construction, and the **number three** overall cause of **death** at work in the United States.

HAMMER's Fall Protection Training is focused on training students to **100% protection**, by having an anchor point at all times.

During training, students observe a demonstration of a suspension in a harness by the instructor, and then learn how to **inspect** and properly **don** the equipment before using it in the **hands-on** scenarios.

Fall Protection Training at HAMMER provides students with the **necessary skills** to maintain their **safety** at heights while performing the work to realize the Hanford mission.

### HAMMER Fall Protection Training:

- Trains 1,500 students in fall protection every year
- Incorporates the latest fall protection practices
- Maintains consistent quality of training through Site-wide committee
- Teaches 100%, continuous fall protection
- Gives students the tools to identify potential fall hazards and dangerous work areas

HAMMER's Fall Protection Training provides real-world, step-by-step skills for preventing death and injury from falls.
