

FALL PROTECTION TRAINING

Falls are the leading cause of death in construction and are within the top three causes of death in the workplace. HAMMER provides expert hands-on training to help prevent falls on the Hanford Site.

- Recognized as a DOE Best Practice training program
- Trains students to maintain 100% protection when exposed to a fall hazard
- Incorporates the latest fall protection practices and lessons learned in a realistic environment
- Utilizes HAMMER's unique, three-story Search and Rescue Building
- Exceeds OSHA training requirements

HAMMER's Fall Protection Training Program provides workers with the critical skills needed to properly inspect, don, and use fall protection equipment. Classes are taught by experienced instructors qualified according to American National Standards Institution standards.

HAMMER immerses workers in student-centered training with realistic hands-on equipment and props to give students the tools to identify fall hazards and dangerous work areas.
