

FIRST AID TRAINING

The work at Hanford makes it critical for workers to be trained in First Aid, CPR, and automated external defibrillator (AED) response. This training saves lives when time is of the essence and has increased victim survival rates across the nation.

- Produces trained workers who are valuable assets to their coworkers, families, and communities
- Exceeds OSHA training requirements
- Provides extensive hands-on training and realistic scenarios
- Uses life-like, interactive CPR mannequins
- Ensures optimal chest compression and rescue breathing techniques

HAMMER's First Aid/CPR/AED Training Program provides over 1,650 Hanford workers with lifesaving training each year. Using the American Health and Safety Institute's MEDIC First Aid curriculum, HAMMER delivers advanced training through hands-on, student-centered activities and realistic prop use.

Students learn to correctly provide emergency resuscitation and first aid until help arrives. Individuals who've received training of this standard are valued throughout Hanford and in the community.
