

HAZWOPER TRAINING

Hanford is the largest, most complex site within the Department of Energy. HAZWOPER training prepares workers to protect themselves, the public, and environment through high-retention, practical-based activities and realistic scenarios.

- Produces confident workers trained to safely conduct high-hazard cleanup work
- DOE Best Practice training program
- Provides best-in-class, performance-based training that sticks
- Collaborates with National Institute of Environmental Health Sciences Grants
- Trains over 4,200 workers annually
- Promotes respect, trust, and meaningful worker involvement

Excellent HAZWOPER training is critical to the success of Hanford's cleanup mission. Performance-based learning activities help workers to develop the confidence and problem-solving skills necessary to safely work in Hanford's complex, high-hazard environments. HAMMER works closely with the National Institute of Environmental Health Science's international union grantees to provide the highest quality HAZWOPER training to Hanford workers.

HAMMER worker trainers bring current knowledge of the job and workplace to training. They possess a wealth of experience and serve as problem solvers in the field, strengthening the safety culture not only at their workplace, but also throughout the complex. HAMMER's Worker Trainer Program has been recognized as a best practice in meaningful worker involvement and a key factor in a strong safety culture.
